

WIREFRAME ACTIVITY

WHAT IS A WIREFRAME?

A wireframe is a simplified sketch or digital drawing used to plan how a web page or app should look and function. It's like a blueprint that shows where different elements, like buttons, text, and images, should be placed on the screen.

Wireframes focus on the structure and layout of the page and don't include too much details like colors or fancy graphics. They serve as a starting point for creating a web page or app, helping designers and developers understand how it should work.

INSTRUCTIONS:

Look at some example portfolio pages to get some inspiration of what features you might want to include in your wireframe for your future website.

WHAT'S THE NEXT STEP?

Now that you're inspired, use the provided blank wireframe worksheet to create your website wireframe. While you are designing your wireframe, consider adding some of the following website features

- navigation bar
- search bar
- header
- paragraphs
- images
- footer
